EDUCATION

The Ohio State University (Bachelor of Science)

Computer Science and Engineering

Specialization: Software Development Engineer

Columbus, OH

Aug 2018 – May 2022

PROGRAMMING EXPERTISE

- Proficient in Java/Jakarta EE design patterns including Singleton, Factory, Model-View-Controller (MVC), and Data Access Object (DAO). Strong expertise in object modeling, data modeling, service-oriented architecture (SOA), and RESTful web service design and implementation. Experienced in application integration, deployment strategies, validation, and performance optimization.
- Well-versed in Core Java concepts such as OOP, Collections Framework, Stream API, Lambda Expressions, Functional Interfaces, Multithreading, and Serialization.
- Hands-on experience with modern frameworks and tools including Spring (IoC, Dependency Injection, Boot, Data JPA, Security, Batch, Transaction Management), Node.js, Angular, React, TypeScript, Bootstrap, Python, and Linux CLI.
- Proficient in ORM tools and SQL databases, including Hibernate, MySQL, PostgreSQL, and JDBC.
- Cloud experience with AWS services such as IAM, ECS, EC2, Lambda, S3, SQS, CloudFormation, and Step Functions. Familiar with serverless architecture, cloud deployments, and infrastructure as code (IaC).
- Experienced with Agile methodologies, project tracking via Jira, Git-based version control (GitHub, Bitbucket), and CI/CD pipelines using Bamboo. Skilled in Docker and Apache Tomcat server.
- Experienced in unit testing using JUnit and Mockito; integration testing and API validation using Postman and Bruno.
- Skilled in log analysis and application performance monitoring using Splunk and Honeycomb.

EMPLOYMENT – Deloitte Consulting, LLP

The Vanguard Group, Inc. | AWS, Java 17, Node.js

Feb 2024 ~ Till date

- Accelerated legacy on-prem application modernization through hands-on contributions to cloud migration and security enhancement initiatives.
- Migrated ECS web services from ID Vault to AWS Secrets Manager, enhancing security posture; gained hands-on experience with ECS architecture, IAM roles, policies, cluster configuration, and runtime variable setup.
- Remediated IAM policy violations and provisioned a SAT environment for an ETF conversion batch application, increasing test coverage and securing hundreds of daily client transactions.
- Led OKTA authentication integration for high-traffic web apps (300K+ daily transactions), enabling coexistence with Auth0 and collaborating with downstream teams to ensure secure, high-availability service communication in production.
- Developed Angular components with OKTA group-based permissions; implemented gateway toggle switches and leveraged RxJS Observables and subscription handling for dynamic, secure API interactions.
- Supported multi-region failover testing, contributing to four successful department-wide high-availability production rollouts through cross-team coordination and validation.
- Served as key point of contact for after-hours and on-call production support for both cloud-native and on-premises applications, ensuring fast incident response and uninterrupted U.S. market operations.

The Vanguard Group, Inc. | Java 8, Spring Tool Suite

Sep 2023 ~ Dec 2023

- Analyzed, documented and reverse-engineered mid-tier logic that accelerates application modernization.
- Compared legacy code with modernized API code to identify the gaps in the business logic.
- Documented service requests and db2 store procedures triggered when persist events to database.
- Used cucumber to create unit tests for new API implementation.

The Vanguard Group, Inc. | Java 11, Spring 5, AWS

April 2023 ~ Aug 2023

- Applied micro services architecture to deploy system functionality into AWS ECS and EC2 servers, used CloudFormation to manage resources, used State Machine to monitor data input and output, automated deployment process using Bamboo CI pipeline.

-
- Created Rest API endpoints with Spring Data Rest, used Spring Data JPA and Spring JDBC to create DAO to persist object state, used transaction manager to manage concurrency and resolve read/write conflicts.
 - Boosted system performance by optimizing algorithms, used CompletableFuture interface to create asynchronous threads to reduce API response time.
 - Involved in designing, creating database schema, performing CRUD operations using PostgreSQL.
 - Logged system events with SLF4J, analyzed logs with Splunk and Honeycomb dashboard, created unit tests with JUnit and Mockito, tested Rest API endpoints with Postman and Bruno.
