Software Development Engineer

EDUCATION

The Ohio State University (Bachelor of Science)

Computer Science and Engineering

Indiana Wesleyan University (Master of Science)

Data Analysis

Certificate: AWS Cloud Practitioner (CLF-C02)

Columbus, OH

Aug 2018 – May 2022

Marion, IN

July 2025 – Dec 2026

June 2026

PROGRAMMING EXPERTISE

- Over three years of experience as application developer in FinTech and investment management companies.
- Cloud experience in design, develop, and maintain cloud-native microservices leveraging AWS to deliver scalable and resilient solutions. Experience with Route53, IAM, ECS, EC2, Lambda, Aurora, S3, Glue, SQS, and Step Functions, and Infrastructure as Code (CloudFormation). Strong understanding of serverless architecture, distributed architecture, Event-Driven Architecture (with Event Bridge).
- Proficient in Java, Python, TypeScript. Hands-on experience with modern frameworks and tools including Spring (IoC, Dependency Injection, Boot, Data JPA, Security, Transaction Manager), Angular, SQL database, DynamoDB, GraphQL, Linux CLI, Postman, Bruno, PagerDuty, HoneyComb and Splunk.
- Experience building CI/CD pipelines, automating deployments, enhancing observability, and improving system reliability and operational efficiency.
- Strong expertise in object and data modeling, deployment strategies, REST web service design, implementation, validation and optimization.
- Well-versed in Core Java concepts such as OOP, Collections Framework, Stream API, Lambda Expressions, Functional Interfaces, Multithreading, and Serialization.
- Experienced with Agile methodologies via Jira, GitHub, BitBucket, and CI/CD pipelines using Bamboo.

PROJECT EXPERIENCE

The Vanguard Group, Inc. | AWS, Python

Jan 2026 ~ Til Date

- Build Portfolio Adjustment function as part of the decommission of monolith application. Gather and document business requirements to modernize and automate application workflow.
- Collaborate with architects, product owners, portfolio managers and stakeholders to translate business requirements into technical solutions. Design and review architecture diagram to optimize data solutions.
- Leveraging AI agents and skills to conduct code submission precheck and code review, perform enhancements for best practice, and ensure adherence to engineering standards.

The Vanguard Group, Inc. | AWS, Java 17, Node.js

Feb 2024 ~ Jan 2026

- Designed and implemented Active-Failover multi-region architecture, with solid understanding of DNS fundamentals, AWS Route 53, Health checks, Application Load Balancers, and multi-layer routing hierarchy within distributed systems.
- Supported multi-region failover testing, contributing to multiple department-wide high-availability production deployments through effective cross-team collaboration, validation, and issue triage.
- Integrated and optimized Supergraph endpoints, writing and maintaining complex queries and mutations.
- Experienced with PostgreSQL, writing advanced SQL queries and developing stored procedures on AWS RDS.
- Developed and maintained RESTful APIs using Java Spring Boot, deployed on AWS Lambda through serverless architectures.
- Migrated ECS web services from ID Vault to AWS Secrets Manager, enhancing security posture; gained hands-on experience with ECS architecture, IAM roles and policies, cluster configuration, and runtime variable setup.
- Accelerated legacy on-prem application modernization through hands-on contributions to cloud migration and security enhancement initiatives.
- Remediated IAM policy violations and provisioned a SAT environment for an ETF conversion batch application, increasing test coverage and securing hundreds of daily client transactions.

- Led OKTA authentication integration for high-traffic web apps (300K+ daily transactions), enabling coexistence with Auth0 and collaborating with downstream teams to ensure secure, high-availability service communication in production, experienced customizing Spring Security filter chain.
- Developed Angular components with OKTA group-based permissions; implemented gateway toggle switches and leveraged RxJS Observables and subscription handling for dynamic, secure API interactions.
- Served as key point of contact for after-hours and on-call production support for both cloud-native and on-premises applications, ensuring fast incident response and uninterrupted U.S. market operations.

The Vanguard Group, Inc. | Java 11, Spring, AWS

Sep 2023 ~ Dec 2023

- Deployed system functionality into AWS ECS and EC2 servers, used CloudFormation to manage resources, used State Machine to monitor data input and output, automated deployment process using Bamboo CI pipeline.
- Created Rest API endpoints with Spring Data Rest, used Spring Data JPA and Spring JDBC to create DAO to persist object state, used transaction manager to manage concurrency and resolve read/write conflicts.
- Boosted system performance by optimizing algorithms, used CompletableFuture interface to create asynchronous threads to reduce API response time.
- Involved in designing, creating database schema, performing CRUD operations using PostgreSQL.
- Logged system events with SLF4J, analyzed logs with Splunk and Honeycomb dashboard, created unit tests with JUnit and Mockito, tested Rest API endpoints with Postman and Bruno.
- Analyzed, documented and reverse-engineered mid-tier logic that accelerates application modernization for legacy money mover application.
- Used cucumber to create unit tests for new API implementation.
